

PANKAJ PATIL

📍 Pune, Maharashtra | 📞 +91 9665631994 | ✉️ pankajpatilsv@gmail.com | www.linkedin.com/in/pankajpatilsv/

Professional Summary

Strategic and results-oriented **IT Professional** with **9 years of global experience** in product ownership and delivering **Manufacturing Execution Systems (MES)**. Adept at collaborating and leading cross-functional teams, managing stakeholders, executing process improvement, transitioning business needs into technical solutions and delivering measurable business value. **Certified SAFe 6 POPM** with expertise across MES tools, Agile methodologies.

Core Skills & Technologies

- **Leadership:** Team Management, Mentorship, Stakeholder Communication, Capability Building
 - **Process Improvement:** Workflow Automation, Cycle Time Reduction, Documentation Standards
 - **MES & Manufacturing:** GE Plant Applications, Proficy, GE Cimplicity, Kepware, Historian, OSI PI, ThingWorx
 - **Data, Reporting & Analytics:** MS SQL Server, Power Query, SSRS, Excel (Macros & VBA), KPI Dashboards, Data Validation and Analysis, Trend Analysis
 - **Development & Tools:** VB6, VBA, Git Bash, JIRA, Bitbucket, Confluence
 - **Methodologies:** Agile, Scrum, SAFe, TDD, Process Improvement
 - **Process Optimization:** Workflow Automation, ETL, Cycle Time Reduction, Technical Documentation
-

Professional Experience

Tata Consultancy Services (TCS), Pune, India | Feb 2017 – Present

Assistant Consultant | Aug 2024 – Present

- Managing stakeholder communication, team capability building, and scalable solution design.
- Driving process automation and agile practices to improve deployment velocity and system uptime.
- Driving Overall Equipment Effectiveness (OEE) improvement from 85% to 90% (+5%) through standardized process implementation and team alignment (Q3 2025–present).
- Proposed use of **Predictive AI** to predict the Sheet Break in Tissue Manufacturing to help reduce waste generated because of Sheet Break.

IT Analyst | Apr 2021 – Jul 2024

- Delivered 15+ custom SSRS reports for SMOM project used daily by 70+ mills, improving mill engineers' operational visibility and supporting \$2M+ annual production target.
- Led a 9 members MES development and deployment team; mentored 15+ freshers to productivity in 90 days.
- Reduced post SSRS deployment setup time by 86% (7 hrs → 1 hr) through process improvement and optimization.

System Engineer | Feb 2019 – Mar 2021

- Implemented process changes at client sites, delivering \$80,000 annual savings.
- Developed automation tools (Excel macros) reducing manual effort from 14 hrs → 30 mins (96% efficiency gain).

- Managed global team (33 members: 26 offshore, 7 onsite) as SPOC for major client implementations across 2 time zones, ensuring 100% on-time deployment and zero production issues.

Assistant System Engineer | Feb 2017 – Jan 2019

- Self-learned SQL & VBA to enhance debugging and accelerate resolution.
- Supported UAT, deployments, and stabilization with zero defect slippage.

Project Experience

Smart Manufacturing Operation Management (SMOM) | Nov 2021 – Present | Team: 80+

- Delivered MES solutions using GE Plant Applications, Historian, Thingworx, SQL Server to support large-scale manufacturing operations.
- Designed standardized SSRS reports and collaborated with mill engineers, improving operational visibility and reducing troubleshooting time.
- Standardized documentation templates like TDD, Validation Document, Release Document reducing review time and improving consistency.
- Created standardized SQL stored procedure and SSRS RDL templates with built-in common logic and features for preconfigured parameters, error handling, formatting etc, enabling rapid report development without starting from scratch for new reports. This reduced new report development effort by ~1 day (9 hours) also ensuring a consistent format across all reports.
- Standardized and documented a reusable, regex-driven VS or VS Code approach for bulk updating 180+ SQL stored procedures (targeted constant replacement and extended conditional logic), enabling the wider team to perform large-scale SP changes in under 2 hours instead of 2 weeks. Thus, reducing effort for similar tasks by over 97% and improving team productivity.

Battery Manufacturing MES System | Jul 2020 – Oct 2021 | Team: 9

- Automated data import processes using Excel macros, reducing manual errors and turnaround time.
- Authored detailed installation and upgrade guides for MES tools, ensuring smooth rollout and reducing support queries during deployments.

Global Factory Template (GFT) | May 2017 – Jun 2020 | Team: 100+

- Contributed to the development of a global MES template for vehicle manufacturing plants enabling reuse and standardization across multiple sites.
- Managed full lifecycle: stakeholder engagement, design (LLDs), development, deployment, and post-go-live support.
- Created user manuals and demo projects to reduce client onboarding time and accelerate adoption of MES solutions.

Education

- **GATE Qualified (ME)** in 2016 & 2017

- **B.E. Mechanical Engineering** – JSPM’s Jayawantrao Sawant College of Engineering, Pune University (2012 – 2016) | First Class with Distinction (72.95%)
 - **12th (CBSE)** – Kendriya Vidyalaya Southern Command, Pune | 85.5%
 - **10th (CBSE)** – Kendriya Vidyalaya Mathura Cantt, UP | 83.6%
-

Certifications

- SAFe 6 POPM (Scaled Agile)
 - Full Stack Development (MERN) – Coding Ninjas (Expected Completion: May 2026)
-

Achievements

- Work as Process Improvement (PI) Champion for my project.
- Optimized MES execution time from **3–4 seconds** to **less than 1 second**, improving system responsiveness and operational efficiency.
- Maintained zero deployment failures for 6-8 months, ensuring high-quality releases.
- Closed 200+ backlog issues in one month, clearing 2 years of accumulated bugs.
- Optimized Scrum calls from 45–60 mins → 30 mins, later adopted by other teams.
- Received 9 client appreciations for futuristic solutions, going the extra mile, extended support during high-pressure periods and timely issue resolution.
- Improved teams work-life balance by streamlining task allocation and realistic planning.
- Facilitated with multiple “**Star of the Month**” and “**On-the-Spot**” awards for consistent delivery excellence, leadership, and process innovation.
